

Climate Change Mitigation - Institutional Research Article

- I. **Title: Climate Change Impacts on East Africa: A Review of the scientific literature. Gland, Switzerland: World Wide Fund for Nature.** Case, M. (2006).

Description: This paper illustrates that climate change in Africa is not only a conservation problem but is a socio-economic issue that must be dealt with at a global scale. One region of the world where the effects of climate change are being felt particularly hard is Africa. Because of the lack of economic, development, and institutional capacity, African countries are likely among the most vulnerable to the impacts of climate change. Climate change impacts have the potential to undermine and even, undo progress made in improving the socio-economic well-being of East Africans. The negative impacts associated with climate change are also compounded by many factors, including widespread poverty, human diseases, and high population density, which is estimated to double the demand for food, water, and livestock forage within the next 30 years.
