

Policy and Legislation – Brochure

- I. **Title: *Adaptive Policies: Guidance for Designing Policies in today's Complex, Dynamic and Uncertain World. Canada: IISD.*** International Institute for Sustainable Development. (2007).

Description: Crafting policies in this setting to address acute issues be they economic, social or environmental is inherently complex and dynamic. This is the reality facing today's policy-maker. The climate change issue is a case in point and has provided motivation for this research on adaptive policies. Higher variability in hydrology is projected by the Intergovernmental Panel on Climate Change, evoking great concern in such areas as world food supply, power generation and irrigation, just to name a few.
