

# Policy and Legislation - Online blog

- I. **Title: A Real-life crystal-ball: Exploring the policies needed for 2050 [Web log post]**. Mackichan, C. (2015, December 24).

**Description:** Predicting the future isn't easy, just ask the makers of Back to the Future II. Their leftfield vision of 2015 from the '80s amused the internet for days earlier this year. However, our generation's prediction of the next 30 years has much higher stakes attached. In 2050 we'll have over 9 billion people to feed and the effects of climate change to take into account. The question isn't so much "Will we fly hover boards to work?" but more "Can we feed ourselves without destroying our planet?" When the generation of 2050 look back at our predictions and policies from 2015, they may not be sharing internet memes, but writing obituaries of a lost chance to save the planet as we know it.
