

Climate Change Concepts, Science and Impacts - Institutional report

1. **Title: A Climate of Conflict. Stockholm: Swedish International Development Cooperation Agency.** Smith, D., & Vivekananda, J. (2008).

Description: Nearly four billion people at risk of armed conflict or political instability due to climate change. Impacts of climate change must be prevented in order to prevent the development of more unrest and more conflicts. The poor suffer the most.

2. **Title: Hidden Heat. Communicating climate change in Uganda: Challenges and Opportunities. Panos Eastern Africa: Kampala, Uganda.** Corner, A. (2011).

Description: Climate change poses a significant threat to lives and livelihoods in Uganda.

Government policies, low-carbon technologies and financial support from international donors will all play a role in Uganda's response to climate change. But central to the fight against climate change in Uganda is effective communication and public engagement. At every level of society from ordinary citizens and farmers, to the media, civil society organizations and local and national government the need for accurate and reliable information about climate change is very high. For Ugandan citizens, the opportunity to have their concerns listened to and their voices heard is equally important. But little is known about how to communicate climate change in Uganda.
