

# Climate Change Concepts, Science and Impacts - Seminar series

- I. **Title: Climate Change Related Impacts on Food Insecurity and Governance in the U.S. and Canadian Arctics. OneNOAA Science Seminars.** Baskin, M. (2016, May 19).

**Description:** Arctic communities have shifted from being relatively self-sufficient to being a mixed subsistence based community relying on traditional and nontraditional food to survive. Dramatic physical impacts from climate change have rendered the region extremely vulnerable to food insecurity. The way governing organizations deal with food insecurity and other factors may directly affect food insecurity.
