

Weather and Climate - Technical Paper

1. **Title: *Assessing Current Climate Risks. (Adaptation Policy Framework, Technical Paper 4). United Nations Development Programme, New York.***

Jones, R. N., & Boer, R. (2003).

Description: This Technical Paper focuses on how to assess the historical interactions between society and climate hazards. Key concepts related to current climate risks are outlined and conceptual models that can be used to assess climate risks over short and long-term planning horizons are introduced and described. Two major approaches to assessing those risks – a natural hazards-based approach and a vulnerability-based approach – are outlined.
